Research context

China's one-child policy was officially implemented in 1980 and abolished in 2015.

The purpose of this questionnaire is to examine how the one-child policy affected the one-child generation. It specifically focuses upon the extent to which the one-child policy affects how the one-child generation thinks about China and the emerging population crisis in China. My dissertation focuses upon examining the importance of the one-child policy to Chinese security and foreign policy aims. This questionnaire completed by the generation that comprised the single child / reduced size families will help to show whether there has been consequential impact on security and foreign policy objectives and structures.
